LESSER-LOEWE-Foundation e.V.

# Dear colleagues,

within the framework of the Lesser-Loewe-Symposium we cordially invite you to „PONS“ (Pathology: Opportunities for Newcomers in Science), the inaugural symposium of the new chair of pathology and pathological anatomy.

Modern pathology is undergoing a highly dynamic change: with digital and molecular techniques, pathology has become an integral partner in precision medicine. At the interface of life- and engineering sciences, but also of modern information technology, this opens up innovative perspectives for a wide range of collaborations, including closer cooperation with all diagnostic disciplines in medicine.

With the help of high-calibre renowned experts we would like to demonstrate the innovative power of modern pathology and tissue analysis as well as biobanking in interaction with artificial intelligence.

In the poster session, doctoral students and young scientists are invited to network and exchange ideas and get to know the young research group at the Institute of Pathology better. In the workshops, tools for digital image analysis can be tested independently and discussed with the specialists.

We are looking forward to interesting conversations, a lively interdisciplinary exchange, and the development of sustainable cooperations!

Kind regards,
